Iteration 2

Betterflye Content Management System

Client Information

- **Client:** Virginie McNamar, Betterflye LLC
- **Mentor:** Michael Himes

Goal: Betterflye is a start-up social media platform for nonprofits to raise funds and find volunteers. Users are able to track their donations across all companies. Our goal is to create a filtering system to prevent inappropriate content from being posted by users.

Team Members

- Sara Bailey

- Jake Dibble

- Dan Gonzalez

- Daniel Spencer

Mentor Feedback (Mid Iteration)

- Michael suggested adding screenshots for user documentation
- Approved of progress, no issues

Mentor Feedback (Before Client Meeting)

- Approved of progress, noted functionality looks good and deadlines are being met.
- Recommended to take time to work on project over break to take care of smaller, quality of life type of changes and fixes

Client Feedback

- Second iteration presentation
  - Liked manual blacklist and whitelist options that were added
  - Liked that the filter is implemented in the organization and initiatives
  - Liked that admins receive messages for blocked posts
  - Client liked progress and didn't have anything she wanted to change
- Approved third iteration features

Iteration 3 Features

- implement admin ability to delete blocked posts and ban users

- complete flagged post functionality that was created by website team

- add options for users to appeal their blocked posts to admin

Interesting Fact

- Harvard University was founded before calculus was discovered
- Harvard - Established in 1636
- Calculus - Discovered roughly 50 years later in Gottfried Leibniz's 1684 "Nova Methodus" and Isaac Newton's 1687 "Principia"
- Galileo Galilei, the famous European physicist, mathematician, engineer, astronomer, and philosopher was still alive during the early years of Harvard. He died in 1642.
